Lightbox with Duratrans print

Lindsey Adams is an award-winning painter, and has an established record as an exhibiting artist. Using her inspirational imagery, she has now developed a unique range of light-works and wall-mounted panels suitable for classic and contemporary environments, enhancing large architectural spaces and more intimate interiors alike.

All of the images are original works, photographed by the artist and derive from a skilful observation of the ever-changing surface of water, producing wonderfully atmospheric large scale works which explore colour, light, and transience.

Images are available in a range of sizes, either mounted in light-boxes, or as prints bonded to aluminium, which 'float' as image panels away from any wall surface. Multiple installations or sequences comprising groups of images can be ordered, with client selection from the comprehensive portfolio, to suit diverse environments and situations.

Lightboxes:

The prints for these are Duratrans, and the light-boxes or panels are available in a range of sizes up to 3000mm x 1800mm.

The latest high quality LED lightpanels are ultra thin, and feature low running costs and maintenance. More traditional case lightboxes are also available, as are double-sided options.

Prints:

The prints are made on rag paper using archival inks, and are finished with a discreet but protective matt laminate. Mounted on lightweight aluminium sheet, they come ready to hang from the concealed subframe. Individual prints can be made in sizes up to 1600mm x 2400mm.

Other configurations, custom sizes, and methods of presentation are possible, and Lindsey Adams is always available to discuss options, advise on individual projects, and to give costings on request.
